

Practice Problems List-2

1. Take two decimal numbers as input and print their sum and average.
2. Take four decimal numbers as input and print their average in decimal (up to two decimal points).
3. Take five floating point numbers as input and print their average in decimal (up to three decimal points).
4. Take input the radius of a circle and find the area of it. (formula: πr^2)
5. Take input the radius of a sphere and find the area of it. (formula: $4\pi r^3/3$)
6. Take input the radius and height of a cylinder and find the volume of it. (formula: $\pi r^2 h$)
7. Take a Celsius temperature (decimal number) as input and convert it to Fahrenheit temperature. ($F = (9C/5) + 32$)
8. Take a Fahrenheit temperature as input and convert it to Kelvin.
(Formula: $K = \{ 5(F - 32)/9 \} + 273.15$)
9. Take a character as input and print the character.
10. Take a character as input and print the ASCII value of the character.
11. Take the ASCII value of a character as input and print the character.
12. Take an uppercase letter from the English alphabet as input and convert it to lowercase.
13. Take a lowercase letter from the English alphabet as input and convert it to uppercase.

14. Take a two-digit integer as input and print the two digits separately in the following format:

The unit's digit is 8

The ten's digit is 5

(Let, the input number is: 58)

15. Take a three-digit integer as input and print the number formed by the first two digits.

Input: 586

Output: 58

16. Take a five-digit integer as input and print the last digit.

17. Take a two-digit integer as input and print the sum of the digits.

18. Take a three-digit integer as input and print the sum of the digits.

19. Take a two digit integer as input and output the reverse number.

20. Take a three digit integer as input and output the reverse number.
