

### **Practice Problems List-8 (Arrays)**

1. Write a program in C to assign elements in an array (no `scanf()`) and print them.
2. Write a program in C to store elements in an array using `scanf()` and print them.
3. Write a program in C to store elements in an array, swap between the first element and the last, and print the array.
4. Write a C program to print all negative elements in an array.
5. Write a C program to count the total number of negative elements in an array.
6. Write a C program to store the marks of  $n$  number of students in an array and count how many of them obtained A+.
7. Write a C program to store  $n$  number of elements in an array and print the number of odd and the number of even numbers.
8. Write a C program to store  $n$  number of integers in an array and print the maximum value.
9. Write a C program to store  $n$  number of elements in an array and print the sum of the elements.
10. Write a C program to store  $n$  floating-point numbers in an array and print their average.
11. Write a program in C to copy the elements of one array into another array.

12. Write a C program to search an element in an array. If the element is present in the array, print its index, else print  $-1$ .
13. Write a C program to store  $n$  number of elements in an array and print them in reverse order.
14. Write a program in C to copy the elements of one array into another array in reverse order.
15. Write a C program to reverse an array. You cannot use another array.
16. Write a C program to store  $n$  number of elements in an array and store their cumulative sum into another array.
